Arpit Kadam

AI Engineer | Generative AI & LLM Systems

Vasai, Mumbai | 8767375722 | arpitkadam922@gmail.com | LinkedIn | Personal Website | GitHub

Summary

AI/ML Engineer specializing in **Generative AI**, **LLMs**, **RAG systems**, and intelligent automation. Experienced in building production-ready **AI applications**, **transformer architectures**, **agentic workflows**, and scalable **ML pipelines** using Python, PyTorch, TensorFlow, FastAPI, Docker, and AWS. Strong understanding of **deep learning**, **NLP**, and **MLOps** with hands-on experience developing real-world AI solutions across document intelligence, healthcare, and predictive systems.

Technical Skills

Languages: Python, SQL
Generative AI & LLMs: LLMs, Generative AI, RAG, LangChain, LangGraph, AI Agents, Prompt Engineering, Vector Databases, LLMOps
ML/DL: Machine Learning, Deep Learning, Transformers, Computer Vision, NLP
Frameworks: PyTorch, TensorFlow, Keras, Scikit-learn, OpenCV, FastAPI, Flask, Streamlit
MLOps & Tools: Docker, MLflow, DVC, GitHub Actions, AWS, CI/CD
Other: PostgreSQL, FAISS, ChromaDB, Pinecone, Hugging Face, Ollama, OpenAI APIs, Gemini APIs, Git, Linux, Data Analysis & Visualization

Professional Experience

Someware Intelligence Systems Pvt. Ltd. Jul 2026 – Present
AI Engineer Intern

- **Ainaa** (live AI fashion stylist for India, in active development): built the taste-ledger personalization layer (per-shopper evidence model in MongoDB, occasion-aware budget bands, undoable migration with shadow-read rollout; 406 unit and 73 integration tests) and a hermetic regression-test harness for the stylist backend.
- **Kranti Cookbook** (RAG cookbook chat for Indian recipes): built multilingual chat across 7 Indian languages, a community recipe pipeline (LLM moderation, email OTP) and a transactional email system; reached 1,200+ devices and 5,700+ messages in under 3 months.
- Built agentic AI workflows with tool-calling and multi-step reasoning using Claude Code and Google ADK; evaluated agent frameworks (LangChain, LangGraph) and cleaned large datasets for downstream LLM pipelines.
- **Technologies**: Python, MongoDB, Pinecone, Gemini, Claude Code, Google Agentic ADK, LangChain, LangGraph

NoviTech R&D Pvt. Ltd. Oct 2024 – Nov 2024
Machine Learning Intern

- Worked on AI and machine learning research projects focused on automation and predictive modeling.
- Built neural network models using TensorFlow and Keras for real-world datasets.
- Contributed to experimentation, training, and evaluation pipelines.
- **Technologies**: Python, Machine Learning, Deep Learning, TensorFlow, Data Analysis

Projects

Tunecast – Self-Hosted Music Generation

- Deployed MiniMax Music 3 on a rented RunPod GPU pod behind a web app and REST API, packaged as one Docker image with FastAPI, a SQLite job queue, bearer-key auth, the SGLang-Omni inference server and an ngrok tunnel.
- Measured one end-to-end run: pod ready in 148 s and a 149 s song generated for about US$0.085; pods are terminated after use so nothing bills while idle.
- Added CI that builds and pushes the Docker image on every push to main, and an offline demo that replays recorded output without a GPU.

Attention Is All You Code

- Built a from-scratch ML and LLM curriculum in PyTorch and NumPy: activation functions and optimizers, a 14-chapter GPT-2 (124M), and reconstructions of Gemma3-270M, OLMo-3 7B and Qwen3 Coder 30B.
- Implemented RMSNorm, RoPE/YaRN, grouped-query attention, SwiGLU and mixture-of-experts layers to understand modern LLM internals.
- Covered fine-tuning end to end: LoRA/QLoRA, knowledge distillation and quantization (PTQ, QAT, GPTQ, AWQ, GGUF), with experiment tracking in Weights & Biases.

DocuXment App – RAG Document Intelligence

- Built a RAG platform for question answering over insurance documents using NVIDIA-hosted LLMs, with ingestion of PDF, DOCX, PPTX, XLSX and TXT files or document links and OCR for scanned pages.
- Combined FAISS for local retrieval and Pinecone for production-scale retrieval, with reranking, context compression and response caching.
- Exposed a bearer-authenticated FastAPI endpoint with latency and accuracy tracking, plus a Flask web UI; deployed on Render.

ReelsNote AI – Agentic Video-to-Notes Pipeline

- Built a four-agent LangGraph pipeline that turns a short-form video URL into a typeset study PDF: download and Whisper transcription, video-language-model analysis, LLM report synthesis, and PDF rendering with real math notation.
- Fused audio, on-screen visuals and caption into one report; every stage caches its output, so re-running a URL is free and each new reel is appended to an indexed notebook.
- Added GPU transcription with CPU fallback and a CI hook that delivers each rebuilt notebook to Telegram.

Education

Shivajrao S. Jondhale College of Engineering, Mumbai University 2026
B.E. in Artificial Intelligence & Machine Learning
